Global Fixed Income

Yield curves, 1st Quarter 2026

Interest rates generally increased across global developed markets for the quarter.

Realized term premiums were negative across global developed markets, as shorter-term bonds generally outperformed longer-term bonds.

In Canada, Germany, UK, Australia and Japan, the intermediate- to longer-term maturity range remained upwardly sloped. In Canada and Germany, the short-term maturity range steepened. However, in Australia and the UK, the short-term maturity segment flattened and inverted, respectively.

Geopolitical Risk

1st Quarter 2026

Wes Crill, PhD, Senior Client Solutions Director and Vice President, Dimensional Fund Advisors

Wars such as the one unfolding in Iran are always disturbing. For investors, there's additional concern over whether these conflicts will spill over into their investment performance. But it's important for investors to be cautious about making asset allocation changes in response to such events.

Markets are forward-looking. Prices move in response to changes in information. When unexpected developments arise that investors deem to be poor for markets, markets often drop. But the flip side is markets always set prices for positive expected returns. Once the news gets reflected in market prices, investors can still expect positive returns even amid worrisome circumstances.

This is borne out in historical stock returns. Global equity markets have continued an upward climb even in the face of economic and political upheavals. We don't have to look far for illustrative examples. During the past few years, stock markets have had positive returns despite multiple wars being fought around the world.

This is not to trivialize the destruction wars bring and their impact on geopolitical risks. But history suggests investors may not help themselves by divesting from stocks. For long-term investors, the best bet is usually to stay the course.
